

THE RLF ADVANTAGE

'Farmer to Farmer' Series | Volume 17 featuring Grant Borgward

by Carol Phillips, Executive Consultant Communications and Media

Grant delivers the final video in this informative and insightful series of presentations about many of the features and benefits gained through the use of RLF products.

RLF has a wide range of high performance Specialty Fertilisers based on low pH technology. This gives total assurance to farmers and growers that all the nutrients put into the drum, end up either inside the leaf, or inside the seed. This is what makes RLF products so clearly different to all other fertilisers on the market.

For over 25 years RLF has been engineering, manufacturing and distributing fertiliser solutions that enhance traditional farm practices. They have proven themselves in Australia where some of the oldest soils in the world exist. And now they are proving equally successful throughout many Asian agricultural regions.

Enjoy this final video presentation to learn exactly how RLF products can benefit you.
