

THE POWER OF RLF SPECIALTY FERTILISERS

With 12 Nutrients in every Application they deliver Outstanding Results

by Echo Dong, Marketing Officer

What is in this IN

This IN tells the story of one cabbage growers experience when he used RLF Specialty Fertilisers his way! They were Seed Priming, **BSN Superstrike** and **Ultra Foliar Fruits & Veggies Plus**.

This particular cabbage patch story

In China, the featured cabbage is commonly called 'foreign-style cabbage'. It is believed it got this name firstly, because it was popular amongst the foreign nationals living in the country, and then secondly, because it had great impact upon the Chinese people. Today this variety of cabbage is grown all over China.

To verify the effects of RLF products on the cabbage crop, the Sales Manager in Guangdong Province, Li Jian and RLF China's Research & Development Director, Qiu Mengbin visited the grower's property in Hengli Town, Nansha District, Guangzhou City on 12th November 2016.

Here are the results they observed on the visit. They are quite remarkable.

Vegetables

How the Cabbage Crop Benefited

The grower used two methods for his plants. They were :

1. by root-soaking with **BSN Superstrike** and **Ultra Foliar Fruits & Veggies Plus** at seedling stage
2. by root-irrigation (or fertigation) with **Ultra Foliar Fruits & Veggies Plus** at later growth stage

The results of both the Control and the Treated crops were described as follows :

Untreated

- Susceptible to Black Spot disease
- Later ripening
- Later to market

Treated with RLF

- Thick, large and dark healthy leaves
- Less disease detected
- Better cores
- Earlier to market

The Products Used

BSN Superstrike is a Seed Priming fertiliser that enables the seed to imbibe (or absorb) a multi-nutrient formulation to support its early development.

BSN Superstrike is a High-analysis Broad-Spectrum Solution that gives the optimum levels of seed nutrient required by the seed in a single application. It is easy to apply, and is fast becoming the new world standard for modern farming practice, where fertilising the seed is every bit as important as fertilising the plant.

Ultra Foliar Fruits & Veggies Plus is a High-analysis Broad-spectrum product that applies specialised nutrient delivery technology to deliver nutrients through the leaf. It is highly concentrated and contains the optimum amount of 12 nutrients with a single application.

Because of this **Ultra Foliar Fruits & Veggies Plus** gives the plant the ability to guard against soil nutrient variability and deficiency, and ensures greater plant protection, increased growth and improved yield qualities.

Summary

The RLF products used on the cabbage crop delivered excellent results. The grower was particularly pleased, and the images in the photos clearly show the difference.

RLF's commitment and aims are to make China's food healthier, and China's agricultural growers more prosperous because of the better quality and yield produced from their farming enterprises and endeavours.
