

## POSITIVE EARLY SIGNS FOR BSN SUPERSTRIKE TRIAL IN TURKEY

A 'sneak peek' at some early images

There is a wheat trial currently being conducted by RLF clients in Turkey.

They have recently shared a number of photo images showing the early comparisons observed between the wheat crop treated with **BSN Superstrike** and the Control crop.

There will be more information on crop outcomes later in the season. But for now, just a 'sneak peek' of things to come.

Early root growth observations with soil retained

Early root growth observations with soil washed away

Later root growth observations in field
